

ASSISTIVE TECHNOLOGY (AT) DEMONSTRATION PROJECT

One on One personalized Demonstrations for people with disabilities and/or family members!

Improve communication using Assistive Technology (AT) across disabilities for health and safety needs. We have items to facilitate communication, including devices with audible and visual messages; communication boards; single message recording devices; a talking photo album; devices with multiple messages; telephones; magnifiers; and items for medication, time management, and voice amplification. These items are also a great **LOW COST BACK UP PLAN** for emergency and disaster preparedness.

Demonstrators in Wayne, Oakland, and Macomb County are ready to demonstrate devices for you!

Q: Who would benefit from a demonstration?

A: People with communication challenges, people experiencing vision or hearing loss, people with learning disabilities, seniors, and their family members.

Q: Who is doing the demonstration?

A: Everyday users of AT who have been trained to demonstrate a variety of items that improve communication. Demonstrators do not sell or promote specific products.

Q: What is a personalized demonstration?

A: Demonstrations are personalized to give you an opportunity to try any items of interest to you, allowing you to compare/contrast item features before you make a buying decision. There is no obligation to purchase anything. You choose what you want to know more about and practice using. We can demonstrate: Devices and strategies that can help with catching someone's attention, remembering important information, using the telephone, reading, writing, speaking, listening, and thinking.

Q: What if I like something and I want to buy it?

A: Funding and resource information will be available at each personalized demonstration.

Q: Where do I go to get a demonstration?

A: Demonstrations are arranged by Disability Network Wayne County/Detroit Disability Network Oakland Macomb, and United Cerebral Palsy of Metro Detroit.

Q: How do I contact them?

A: Call or email Cathy Mcadam @ 313 563-1412 or mcmcadam@att.net

Project supported by MDRC and UCP/Metro Detroit
